

WEB PAGES TO FIT YOUR NEEDS

For companies that want to have a quality and important presence on Internet.

It's about giving to your clients information about your products, promotions, news and references for you, so the page can be used for contact, customer loyalty and other marketing purposes.

We need to analyze your technical needs in order to know what kind of page is the best for your company.

We think web projects can be classified in three main categories, those based in html pages with static content and flash animations, those based only in flash with a lot of dynamic content, multimedia and animations, and those based in html with a database connection.

SPECIFICATIONS

The construction of the web project includes:

- Assistance about the project and the web technology to use.
- Analysis of our client needs.
- Quick sketch design of your web page before we build the page completely so that we get feedback and conformity about the proposed design.

*The texts and photos of each page should be provided in digital format (Txt, Word). In case it's not we will send you a budget for the transcription of these.

*The photos must be provided in digital format (.jpg, .gif, or other format). In case you don't, we'll send you a budget by the quantity of photos to scan.
